Preface	xiii
Acknowledgments	xv
Chapter 1. Introduction	1
The Need for Measurement and Control	1
Methods of Measurement	2
Types of Control	4
Methods or Modes of Control	9
Summary	14
Review Exercise	14
Chapter 2. The Units of Measurement	15
Comparison of Systems of Units	15
Système International (SI) d'Unités	16
Measuring Length	16
Measuring Time	18
Measuring Temperature	18
Measuring Mass, Weight, and Force	19
Measuring Work and Energy	22
Measuring Dimensions of Various Quantities	24
Summary	27
Review Exercise	28
Chapter 3. Final Control Elements	29
Valves	29
Sizing and Piping Arrangements	39
Actuators	39
Controlled-Volume Pumps	48
Variable-Volume Pumps	50
Other Final Control Elements	50
Summary	50
Review Exercise	50
Chapter 4. Pneumatic Automatic Controls	51
Pneumatic Controls	51
Commercial Pneumatic Controllers	61
Volume Booster Relays	64
Valve Positioners	65
Summary	69
Review Exercise	69
Chapter 5. Electronic Automatic Controls	71
Analog Circuits and Equipment	71

Modes of Control and Control Loops	73	
System Stability and Loop Tuning	78	
Programmable Logic Controllers (PLC) Control Systems		79
Specialized Flow Computers	81	
Distributed Control Systems	81	
Human-Machine-Interface (HMI)	83	
Summary	84	
Review Exercise	84	
Chapter 6. Pressure Measurement and Control		85
Units of Pressure Measurement	85	
Mechanical Pressure Elements	87	
Electronic Pressure Measurement	92	
Vacuum Measurements	95	
Pressure Control	97	
Summary	104	
Review Exercise	105	
Chapter 7. Temperature Measurement and Control		107
Defining Temperature Measurement	108	
Mechanical Temperature Sensors	109	
Electronic Temperature Measurement	112	
Wheatstone Bridges	117	
Electronic Temperature Transmitters	117	
Temperature Control	121	
Summary	124	
Review Exercise	124	
Chapter 8. Liquid-Level Measurement and Control		125
Defining Level Measurement	125	
Mechanical Level Sensors	125	
Electrical Level Measuring Devices	134	
Level Control	138	
Summary	140	
Review Exercise	141	
Chapter 9. Flow Measurement	143	
Defining Flow Measurement	143	
Mechanical Flow Sensors and Meters	144	
Electronic Flow Sensors and Meters	150	
Summary	156	
Review Exercise	156	
Chapter 10. Flow Control	157	
Mechanical Flow Control Elements	157	
Electronic Flow Controllers	159	
Integral Flow Controllers	162	
Summary	170	
Review Exercise	170	

Chapter 11. Gravity, Viscosity, Humidity, and pH	171
Measuring Specific Gravity and Density	171
Measuring Viscosity	177
Measuring Humidity and Dew Point	180
Measuring pH	185
Summary	187
Review Exercise	187
Chapter 12. Programmable Logic Controllers	189
PLC Operating Concepts	189
PLC Brands	195
PLC Applications and Loop Tuning	203
Summary	205
Review Exercise	205
Appendix A. Numbering Systems and Codes	207
Appendix B. Temperature Sensor Reference Tables	213
Glossary	297

Figures

1.1	Direct measurement examples of level and pressure	3	
1.2	A method for inferring liquid level from hydrostatic pressure		3
1.3	Method of manual control of liquid level	4	
1.4	Manual control of hot-water temperature	4	
1.5	Automatic control of level	5	
1.6	Automatic control of temperature in hot-water heater	5	
1.7	Example of resistance in transfer of energy from one capacity to another		7
1.8	Reaction to a sudden change in opening of valve X in a liquid-level control system		8
1.9	Reaction to step change in control valve X in a water-temperature control system		9
1.10	Floating mode of liquid-level control	10	
1.11	A proportional-speed floating control-level control system	10	
1.12	A proportional control system with proportional band of 0 to 100 percent		11
1.13	A system using proportional plus-reset mode of control	13	
2.1	Balance scale for determining mass	21	
2.2	A spring scale determines mass by measuring the distance the spring is stretched.		22
2.3	A U-tube manometer is a common device for measuring pressure.		25
3.1	Double-ported valve	29	
3.2	Two types of ported valves		30
3.3	A split-body valve	31	
3.4	A typical angle-body valve		31
3.5	Three-way valves	31	
3.6	Butterfly valve	32	
3.7	A pipeline gate valve		33
3.8	Flow curves	33	
3.9	Types of valve plugs		34
3.10	Equal percentage plug		35
3.11	Linear plug	35	
3.12	Plugs for low-flow rates		36
3.13	Stuffing box	37	
3.14	Self-lubricating stuffing box with Teflon packing		37
3.15	Valve bonnets and extensions		38
3.16	Throttling valve	39	
3.17	Diaphragm actuator	40	
3.18	A spring-loaded, reverse-acting diaphragm actuator		41
3.19	Air-loaded diaphragm actuator	41	
3.20	Pneumatic piston actuators	42	
3.21	Arrangement of a typical air supply for pneumatic actuators		43
3.22	Solenoid actuator and valve	44	
3.23	Circuit diagram for floating control of reversible motor		45
3.24	Proportional control system	46	
3.25	Balancing relay	47	

3.26	A speed control system for a steam turbine	47	
3.27	Controlled-volume pump as a final control element	48	
3.28	A combination open-loop and closed-loop system with a controlled-volume pump		49
3.29	Gas-powered injection pump	49	
3.30	Variable frequency, variable speed pump drive	50	
3.31	An electric switch as the final control element in an electric hot-water system		50
4.1	A self-contained force-loaded pressure regulator	51	
4.2	A self-contained spring-loaded regulator	52	
4.3	A fixed orifice as part of a pneumatic controller	53	
4.4	A simplified pneumatic controller	53	
4.5	A two-position (on-off) controller in a liquid-heating system		54
4.6	Using an air relay to provide linear control	55	
4.7	A proportional controller with a bellows-spring assembly		56
4.8	Proportional controller in a liquid-heating system	57	
4.9	Performance of controller at different throttle range settings		58
4.10	Proportional controller with automatic reset	59	
4.11	Performance curves for multi-mode controller action	60	
4.12	Response curves of different modes following quick change in load		61
4.13	Continuous-bleed air relay	62	
4.14	Nonbleed air relay	62	
4.15	Pneumatic controller, Model 40	63	
4.16	Flapper-nozzle assembly, Model 40	64	
4.17	A booster relay, used to overcome response lag due to long connecting lines between controller and valve	65	
4.18	Schematic of a simplified valve positioner	66	
4.19	Valve positioner	67	
4.20	A valve positioner for a pneumatic piston actuator	69	
4.21	Valve positioner relay	69	
5.1	Two- and four-wire transmitters	72	
5.2	Electronic transmitter and other components in a control loop		73
5.3	Electronic proportional controller	74	
5.4	Open loop and proportional control	76	
5.5	Proportional-plus-integral control	77	
5.6	Open loop and proportional-plus-integral control	77	
5.7	Proportional-plus-integral-plus-derivative control (PID)		78
5.8	Open loop and proportional-plus-integral plus derivative control		78
5.9	PLC closed-loop control system	80	
5.10	Flow controller	81	
5.11	Panelview HMI	83	
6.1	Pressure measurement comparisons	86	
6.2	Three basic types of Bourdon tubes	88	
6.3	Bourdon tubes arranged to measure differential pressure		88
6.4	A pressure element with single-shell metallic diaphragm		89
6.5	Pressure element with a capsule of two metallic diaphragms		89
6.6	A compound element with three diaphragm capsules	89	

6.7	A nonmetallic diaphragm with calibrated spring	89	
6.8	Using a metallic diaphragm-variable resistor to measure liquid level		90
6.9	Differential-pressure gauge using a spring-opposed bellows		90
6.10	A mercury-bell differential-pressure gauge	91	
6.11	Protective devices for mechanical instruments	92	
6.12	Typical four-wire voltage transmitter	92	
6.13	A two-wire current transmitter	93	
6.14	Electronic two-wire pressure transmitter with zero and span adjustments		93
6.15	Smart pressure transmitter and interface unit	94	
6.16	A type of McLeod gauge	95	
6.17	A Pirani gauge using a resistance element	95	
6.18	A Pirani gauge using a Wheatstone bridge	96	
6.19	Thermocouple vacuum gauge	97	
6.20	Pressure-controlled air compressor	97	
6.21	A system with hydrostatic pressure control	98	
6.22	A system with air or gas pressure control	98	
6.23	Relief valve with typical spring-loading	99	
6.24	Relief valve that protects against overpressures and underpressures		99
6.25	A pressure relief valve	99	
6.26	Location of instruments in a rural gas line	99	
6.27	A relief valve used with a pump	100	
6.28	An intermediate-pressure regulator	101	
6.29	A low-pressure gas regulator	101	
6.30	Performance curves for a 1-inch low-pressure regulator		102
6.31	A high-pressure regulator	103	
6.32	A weight-loaded back-pressure regulator	103	
6.33	Diagram of a proportional band pressure controller		104
6.34	PLC-controlled air compressor	105	
7.1	Types of temperature-measuring devices and their ranges		107
7.2	Comparison of four temperature scales	108	
7.3	A simple liquid-in-glass thermometer	109	
7.4	A mercury thermometer used as a component of a temperature alarm system		110
7.5	Filled-system thermometer with no compensating elements	110	
7.6	Bimetal elements used in filled systems as compensating components		111
7.7	Bimetal thermometer elements	112	
7.8	Bimetal elements in wound forms	113	
7.9	Thermometer with bimetal element	113	
7.10	A butt-welded thermocouple	114	
7.11	Thermocouple schematics	115	
7.12	Schematic millivoltmeter with thermocouple	115	
7.13	Optical pyrometers that infer temperature from color and brightness		116
7.14	Typical Wheatstone bridge circuit	117	
7.15	A two-wire current transmitter for measuring temperature	118	
7.16	Electronic temperature transmitter connections with RTD sensor	118	
7.17	Electronic temperature transmitter connection diagram with thermocouple sensor		118
7.18	Electronic two-wire temperature transmitter with zero and span adjustments		119

7.19	Test calibration circuit of temperature transmitter	119	
7.20	Smart temperature transmitter and interface unit	120	
7.21	Block diagram of a typical smart temperature transmitter		121
7.22	Temperature safety control valves	122	
7.23	Mixing valve	122	
7.24	PLC temperature controller	123	
8.1	Basic types of sight glasses	125	
8.2	Sight glass for low-pressure, low-temperature systems		126
8.3	Sight glass for high-pressure, high-temperature systems		126
8.4	Buoyancy-type instrument with full-range indicator		127
8.5	Restricted range level controller	127	
8.6	A float-operated liquid-level controller	127	
8.7	Float-operated controller used with dump valve on oil and gas separators		127
8.8	A pilot-operated controller	128	
8.9	Pilot valve for the controller in Figure 8.8	128	
8.10	Displacer-float assembly of a torque tube displacer-type level indicator and controller		129
8.11	Schematic of a control system using displacer-type level indicator and controller		129
8.12	Displacer-type indicator and controller with flexure tube	130	
8.13	Liquid-seal type of hydrostatic pressure measuring system		131
8.14	Diaphragm-box type of hydrostatic measuring system		132
8.15	Air trap method of level indication	133	
8.16	Air bubble or air-purge level system	133	
8.17	Pressurized tanks with differential pressure gauge	134	
8.18	Electric liquid-level controller operating a switch with a float and flexure tube		135
8.19	Use of level switch in dry oil petroleum storage tank	135	
8.20	A capacitor-type liquid-level gauge	136	
8.21	Metritape liquid-level sensor	136	
8.22	Electronic differential-pressure transmitter measuring liquid level		137
8.23	Open-tank level measurement with required elevation of zero		137
8.24	Open-tank level measurement with required suppression of zero		138
8.25	On-off level control with two outflow pumps	139	
8.26	Level control using variable speed outflow pumps	140	
9.1	Flowmeter restrictive elements	144	
9.2	Typical venturi tube	145	
9.3	Dall tube	145	
9.4	Flow nozzles	146	
9.5	Three views of installed orifice plate		147
9.6	Three types of orifice plate	147	
9.7	Straightening vanes	148	
9.8	Orifice meter with a modified U-tube manometer		149
9.9	Bellows assembly for a bellows-type orifice meter		150
9.10	Electronic differential-pressure transmitter for measuring flow		151
9.11	Exploded view of magnetic flowmeter	151	
9.12	Mass flowmeter that measures torque	152	
9.13	Mass flowmeter	152	

9.14	Turbine flowmeter	153	
9.15	Demonstrating the vortex principle of flow		153
9.16	A typical vortex flowmeter	154	
9.17	Gas meter	154	
9.18	Cutaway view of gas meter case	154	
9.19	Operation of the gas meter	155	
9.20	Phantom view of a gas meter	156	
10.1	Fixed flow bean	157	
10.2	Adjustable flow bean	157	
10.3	Force-balance differential-pressure sensing instrument		158
10.4	Electronic flow control elements	159	
10.5	Multivariable transmitter for measuring mass flow rate		160
10.6	Multivariable smart flow transmitter block diagram and sensor module		161
10.7	Flow control system using turbine flowmeter feedback and PLC		161
10.8	Flow controller	162	
10.9	Installation for maintaining constant downstream pressure		163
10.10	Installation for maintaining constant upstream pressure		163
10.11	Downstream pressure sensing device for a steam-driven pump		164
10.12	Throttling valve in bypass line for a positive-displacement pump		165
10.13	Control valve installed downstream from a centrifugal pump		165
10.14	Feed-rate control for initial column of fractionating columns		166
10.15	Liquid-level controller for succeeding fractionating columns		166
10.16	Electronic/pneumatic controller	167	
10.17	A system with simple flow-rate control	167	
10.18	Liquid-level control for a system without a constant rate of feed		167
10.19	Liquid-level control system with accumulator tank	168	
10.20	System using vapor pressure differential to establish set point of controller		169
11.1	Typical hydrometers used to measure specific gravity	173	
11.2	An air-bubbler system with reference tank for measuring specific gravity		173
11.3	Air-bubbler system without reference tank	174	
11.4	A displacer-float specific gravity meter	175	
11.5	Schematic of system using displacer float	176	
11.6	Lab equipment used over a century ago to determine viscosity of liquids		177
11.7	Direct-reading instruments for measuring viscosity	179	
11.8	Control system for maintaining viscosity in a liquid	180	
11.9	Chart of relative humidity versus dry- and wet-bulb temperatures		181
11.10	A laboratory method for determining vapor pressure	181	
11.11	Principles involved in hair-type indicator used to measure relative humidity		182
11.12	A sling psychrometer	183	
11.13	A recording psychrometer for measuring and recording humidity		183
11.14	A gold-leaf grid, lithium chloride element used for measuring humidity		184
11.15	A Bureau of Mines type of dew-point tester	184	
11.16	Dew-point electrical measuring device	185	
11.17	pH factor and ion concentration	186	
11.18	Portable electric instrument that uses a glass electrode to measure pH factor		186

12.1	Typical relay ladder logic diagram	189	
12.2	Five components of a PLC system	190	
12.3	Ladder logic diagram of air compressor control	191	
12.4	Pipeline pump operation	193	
12.5	Allen-Bradley processor modules	196	
12.6	Allen-Bradley I/O modules	197	
12.7	Typical chassis arrangement of Allen-Bradley processor and I/O modules	197	
12.8	Chassis arrangement with input and output field devices	198	
12.9	Allen-Bradley analog input and output modules	199	
12.10	Functional diagram of analog input modules	199	
12.11	Process transmitter connection to a 12-bit analog input module	200	
12.12	Analog output module of PLC	201	
12.13	Frequency and RTD/thermocouple input PLC modules	202	
12.14	Temperature control using PID module	203	
12.15	Process variable responses to disturbances	204	
12.16	Closed-loop tuning methods with software	205	

Tables

2.1	Conventional and SI Units of Measurement	17	
6.1	Types of Sensors Used to Measure Various Pressure Ranges	87	
7.1	Relative Merits of Filled Systems	111	
12.1	Binary and Octal Numbers	194	
12.2	Binary and Hexadecimal Numbers	194	
12.3	Binary, Octal, Hexadecimal, and Decimal Numbers	195	
12.4	Decimal to Binary to BCD Conversions	195
