Foreword	
Preface	
Acknowledgments	
Chapter 1: Basic Concepts of Geology	1
Uniformitarianism	2
Geologic Time	5
How the Earth Began	10
Plate Tectonics	13
The Mobile Crust	15
Rifting	19
Transform Faulting	19
Convergence	20
Rocks and Minerals	21
Igneous Rock	22
Sedimentary Rock	22
Metamorphic Rock	24
Chapter 2: Sedimentation	27
Origins of Sedimentary Particles	27
Clastics	27
Pyroclastics	30
Nonclastics	31
Sedimentary Transport	32
Mass Movement	32
Stream Transport	33
Other Transporting Agents	35
Depositional Environments	36
Continental Environments	36
Transitional Environments	40
Marine Environments	42
Sedimentary Facies	46
Lithification	47
Compaction	47
Cementation	48

Classification of Sedimentary Rocks.....	49
Clastics .....	49
Evaporites.....	51
Carbonates .....	52
Stratigraphy .....	52
Correlation.....	54
Superposition.....	56
Unconformities .....	57
Faunal Succession .....	59
Relative Age .....	60
Chapter 3: Oil and Gas Accumulation .....	67
Origin .....	67
Chemical Factors.....	67
Biological Factors .....	69
Physical Factors.....	70
Source Rocks .....	71
Migration .....	71
Primary Migration .....	72
Secondary Migration .....	72
Accumulation.....	75
Trapping .....	75
Differentiation.....	78
Types of Traps .....	79
Structural Traps.....	79
Stratigraphic Traps .....	82
Hydrodynamic Traps .....	88
Combination Traps.....	89
Timing and Preservation of Traps.....	91
Chapter 4: Exploration .....	93
Locating the Prospect .....	93
Using Data Libraries.....	93
Exploring Within Known Oil Provinces .....	94
Exploring Unknown Areas .....	94
Geologic Surveys .....	95
Surface Data.....	95
Geophysical Surveying .....	97
Stratigraphic Testing.....	105
Documenting the Prospect.....	106
Geologic Mapping.....	106
What Makes a Good Prospect?.....	112

- Chapter 5: Economics .....117
  - Summary of an Economic Analysis .....119
  - Availability of Mineral Rights .....120
  - Evaluation of Estimated Reserves .....127
  - Regulation Considerations.....127
  - Taxation Considerations.....130
  - Cash Flow Analysis .....131
  - Present Value Concept .....134
  - Risk Analysis .....135
  
- Chapter 6: Well Sitting.....139
  - Duties of the Geologist .....141
  - Logging .....142
    - Sample Logs .....142
    - Wireline Well Logs .....145
    - Log Interpretation.....154
  - Formation Testing .....156
    - Formation Test Data .....157
    - Predicting Production Behavior .....157
  - Completing the Discovery .....157
    - Evaluation.....157
    - Completion .....159
  - Exploration Success.....162
  
- Chapter 7: Field Development .....165
  - Expanding and Maintaining Productivity .....165
    - Selecting Well Sites .....165
    - Recovery Efficiency.....168
    - Plugging and Abandonment .....169
    - Describing the Reservoir .....171
  - Estimating Reserves.....182
    - Volumetric Calculation .....182
    - Material Balance .....184
  - Modeling.....184
    - Analog Models.....184
    - Simulation .....185
  - Improving Recovery .....187
    - Drive Mechanism Enhancement.....187
    - Fluid Properties Enhancement .....187
    - Programs Addressing Heterogeneities.....190

Chapter 8: Past, Present, and Future .....	193
History .....	193
Early Development of the Industry .....	194
Development of Petroleum Geology .....	195
Development of the Profession .....	195
The Production Cycle .....	198
Consumption .....	199
Reserves and Resources .....	199
Prospects .....	202
Glossary .....	205
Bibliography .....	225
Index .....	229
