Contents

Diesel Fuel	25	
Specific Gravity and API Gravity	25	25
Fuel Quality	26	
Volatility	26	
Amount of Carbon Residue	27	27
Viscosity	27	
Sulfur Content	27	
Ash, Sediment, and Water Content	28	28
Flash Point	28	
Pour Point	28	
Acid Corrosiveness	28	
Ignition Quality and Cetane Number	29	29
Effects of Unsatisfactory Fuel	30	30
To Summarize	31	31
Fuel Supply Systems	32	
System Using Separate Injection Pump and Day Tank	32	32
Main Tanks and Day Tanks	32	
Pumps Versus Gravity	33	
System with Built-In Pumps	33	
Fuel Pump	33	
Excess Fuel	33	
Fuel Tank Vents	34	
Total Volume and Useful Volume	35	35
Fuel Handling Tip	35	
Delivery Line Location	35	
Filters, Strainers, and Centrifuges	36	36
Transfer Pumps	42	
Pump Sizing	42	
Pump Location	42	
Fuel Lines	42	
Fuel Return Lines	44	
Primary Pump and Injector Pump	44	44
Starting an Engine	44	
Air Knocking	45	
Removing Air	45	
To Summarize	45	
Fuel-Injection Systems	47	
Injection System Requirements	47	47
Accurate Fuel Metering	47	
Proper Injection Timing	47	
Fuel-Injection Rate	48	48
Fuel Atomization	48	
Good Fuel Distribution	48	48
Types of Injection Systems	48	
Multipump Injectors	49	49
One Pump on Each Cylinder	50	50
Single-Unit Multiple Pumps	51	51
How Cam-Operated Plunger Pumps Work	51	51
Unit Fuel Injection	57	

Distributor Injection	61	
Common-Rail Injection	64	
To Summarize	66	
Governors	67	
Centrifugal Force	68	
Flyweights, Springs, and Oil Pressure	68	
Terms Used With Governors	69	
Types of Governor	69	
Mechanically Actuated Governors	70	
Hydraulically Actuated Governors	73	
Variations in Speed	74	
Electrically Actuated Governors	76	
To Summarize	78	
Lubrication Systems	81	
What Lubricating Oil Does	81	
Oil Pumps	82	
Oil Flow Rates	82	
Relief Valves	82	
Oil Strainers and Filters	83	
Strainers	83	
Filters	83	
Filter Pressure Gauges	86	
Filter Bypass Valves	86	
Oil Coolers	86	
Oil Coolers Bypass System	87	
Engine Oil Supply Areas	88	
Crankshaft Lubrication	89	
Piston Lubrication	89	
Camshaft Lubrication	89	
Rocker Arm and Valve Lubrication	90	
Timing Gear Lubrication	90	
Injector Pump and Governor Lubrication	92	
Prestart Lubrication Systems	92	
Explosion Covers	93	
Oil Quality	93	
Sulfur Content of Fuels and Oil Quality	94	
Using the Proper Oil	94	
Detergent Oils	95	
Oil Contamination	95	
Oil Testing	95	
To Summarize	96	
Cooling Systems	97	
Purpose of the Cooling System	97	
Coolant	97	
Radiators	98	
Fins	98	
Engine Fans	98	
Heat Exchangers	99	

Coolant Flow	100	
Pressurized Cooling Systems		100
More About Radiators	101	
Radiator Size	102	
Coolant Flow	102	
Fans	102	
Thermostats (Temperature Regulators)		102
How Radiators Work	103	
Top Tank	103	
Fins	104	
Tube Spacing	104	
Air Flow	105	
Coolant Water Quality	106	
Dirt	106	
Dissolved Minerals	106	
H ₂ S and CO ₂	106	
Oxygen	106	
How to Protect the Cooling System		107
Cooling System Checks	108	
Engine Rooms and Ventilation		109
More About Heat Exchangers	110	
To Summarize	112	
Air-Intake Systems	113	
Air Cleaners	114	
Types of Air Cleaners	114	
Dry Air Cleaners	114	
Oil-Bath Air Cleaners	117	
Additional Cleaner Maintenance		119
Blowers (Superchargers)	120	
Roots Blowers	120	
Causes of Blower Failure	122	
Turbochargers	122	
Aftercoolers	124	
Back-Pressure and Temperature Effects		124
To Summarize	125	
Exhaust System	127	
Purposes	127	
Exhaust System Parts	128	
Exhaust Manifold	128	
Exhaust Pipe	129	
Mufflers	130	
Tail Pipe	131	
To Summarize	132	
Starting Systems	133	
Types of Starter	133	
Why Diesel Engines May Not Start		133
Low-Pressure Problems	133	
Low-Temperature Problems	133	

Electric Starters	134	
Direct Current Versus Alternating Current		135
Starter System Parts	135	
How Electric Starters Work	136	
Generators and Cutouts	137	
Batteries	138	
Air-Motor Starters	139	
Air Requirements	140	
Cleaning an Air Starter	140	
Hydraulic Starters	140	
Gasoline Engine Starters	141	
Compressed-Air Starting	142	
To Summarize	144	
Instruments	145	
Pyrometers	145	
Estimating Engine Load	145	
Cylinder Temperatures	146	
Dividing Loads Equally	146	
Oil-Pressure Gauges	146	
Low Oil Pressure	146	
High Oil Pressure	147	
Oil-Temperature Gauges	148	
Lower-than-Normal Oil Temperature	148	
Higher-than-Normal Oil Temperature	148	
Coolant-Temperature Gauges	148	
Inlet Versus Outlet Temperature	149	
Air Manifold-Pressure Gauge	149	
Dirty Air Filters	149	
Tachometers	149	
To Summarize	150	
Alarms and Shutdown Systems	151	
Overspeed Trip Devices	151	
Checking Overspeed Trips	151	
Compounded Engines and Overspeeding	152	
Low-Oil Pressure Alarms	152	
Low-Oil Pressure Shutdowns	153	
Engine Start-up with Low-Oil Pressure Alarms and Shutdowns	153	
Testing Low-Oil Pressure Alarms and Shutdowns	153	
High-Coolant Temperature Alarms and Shutdowns	154	
Engine Shutdown Considerations	154	
Blowouts and Natural Gas	154	
Turbochargers and Oil	154	
Using CO ₂ to Stop an Engine	154	
To Summarize	155	
Engine Operation	157	
Prestart Checks	157	
Start-Up	159	

Engine Warm-Up	160	
Warm-Up Speeds	160	
Putting an Engine to Work	162	
Engines Driving a Mechanical Assembly		162
Engines Driving a Generator	162	
Checks to Make While Engine Runs	163	
To Summarize	164	
Reports	165	
Engine Monitoring	167	
EXHAUST Monitoring	167	
Maintenance Schedules	167	
To Summarize	168	
ELECTRIC POWER	169	
Introduction	169	
Generators and Alternators	171	
Advantages of AC Generators	172	
DC Generators	172

Glossary	197	

Frontispiece: Diesel engines and electric generators power an offshore rig. xiv

1.	Large internal combustion engines power drilling rigs.	1
2.	Prime movers and the compound in a mechanical drive	2
3.	Diesel engine and generator in an electric drive system	3
4.	Powerful electric motors drive a mud pump.	3
5.	Diagram of an internal combustion engine	5
6.	At left, piston is at bottom dead center (BDC); at right, piston is at top dead center (TDC).	9
7.	Supercharger (blower)	10
8.	Schematic drawing of a four-stroke diesel engine	13
9.	Cross section of a four-stroke/cycle diesel engine	18
10.	Schematic drawing of a two-stroke/cycle diesel engine	21
11.	Cross section of a two-stroke/cycle diesel engine	23
12.	Cam	23
13.	Diesel engine fuel supply system	32
14.	Fuel system showing vented fuel tank, strainer, filter, pump, and injectors	34
15.	Tank-type fuel filters	37
16.	Disposable fuel filter made of wool or synthetic cloth	39
17.	Disposable fuel filter made of micropore paper	39
18.	Heavy-duty spin-on filter	40
19.	Stainless steel union connects lengths of pipe	43
20.	Plunger pump for fuel injection	49
21.	Multipump injection system with individual pumps placed next to each cylinder	50
22.	Fuel injector pump	51
23.	Single injector unit	52
24.	Plunger operation	53
25.	Cutaway view of an injector pump	54
26.	Operation of pump plunger	55
27.	Spray nozzle valve (closed position)	57
28.	Unit injector assembly	58
29.	Cutaway view of a unit injector pump	59
30.	Distributor-type injector pump	61
31.	Operation of distributor-type injector pump	62
32.	Common-rail injector system	64

Figures

33. Rack and pinion controls fuel metering.	67
34. Centrifugal force moves a steel bolt on a string away from center of spin.	68
35. Principle of a mechanical governor (Dotted lines indicate various positions of parts governor will take in course in operation.)	70
36. Principle of two-speed mechanical governor	72
37. Principle of hydraulic governor	73
38. Hydraulic governor with compensating device	75
39. Electrically actuated hydraulic governor	76
40. Lubricating oil pump for a diesel engine	82
41. Bearing damaged by foreign particle	84
42. Oil filter units on a heavy-duty diesel engine	85
43. Placement of an oil cooler in lubrication system	86
44. Lube oil system of a diesel engine showing oil cooler bypass system (striped lines)	87
45. Engine parts supplied with lubricating oil	88
46. Crankshaft of a heavy-duty diesel engine	89
47. Valve and rocker arm lubrication	90
48. Set of timing gears in a heavy-duty diesel engine	91
49. Lubricating oil channels to timing gears	91
50. Features of a radiator	98
51. Features of a heat exchanger	99
52. Coolant flow through the cooling system of an engine	100
53. Radiator damage reduces air flow.	104
54. Dirt and dust plug air passages in a radiator.	104
55. Automatic shutter arrangement for radiator	105
56. Water pump shaft packing	108
57. A heat-exchanger cooling system	110
58. Parts of a heavy-duty dry air cleaner	115
59. Air flow through a heavy-duty oil-bath air cleaner	117
60. Diagram of a Roots blower	120
61. Exploded view of blower components	121
62. Schematic diagram of a turbocharger (top) and flow of air and exhaust through it (bottom)	123
63. Diesel engine exhaust system	128

64.	Approximate sizes for diesel engine exhaust piping	129
65.	Exhaust stacks	131
66.	Battery-operated electric starter on a 300-kW auxiliary power unit	135
67.	Cross section of a Bendix-type starting motor for small engines	136
68.	Cross section of an electric starter using a solenoid	137
69.	Air-motor starter	139
70.	Hydrostarter	140
71.	Simple DC generator	173
72.	Generator stator	174
73.	Generator rotor (armature)	174
74.	Schematic of a simple AC generator (alternator)	175
75.	Control hook-up of DC electric drive, typical except for air throttle rather than more common electric throttle	179
76.	DC electric motor used on a drilling rig	180
77.	Assignment switch for DC electric drives	181
78.	Control panel for DC electric drives	183
79.	Plug-in connector	184
80.	Brush holder	186
81.	DC voltage shown as a sine wave	187
82.	Three-phase alternators connected to rig engines	188
83.	SCR (AC to DC) rig system	189

1.	AC Power Required By Rig Equipment	194
