

**SECTION 10270– ACCESS FLOORING
CONSTRUCTION STANDARD**

ACCESS FLOORING

PART 1: GENERAL

1.01 Scope of Standard

- A This standard provides general guidance concerning the specific preferences of the University of Texas at Austin for prefabricated, raised flooring assemblies that create a cavity between the finish and structural floor surfaces for mechanical and electrical services.
- B. UT recognizes that project conditions and requirements vary, thus precluding the absolute adherence to the items identified herein in all cases. However, unless there is adequate written justification, it is expected that these guidelines will govern the design and specifications for UT projects.

1.02 Quality Control

- A. Type: It is preferred that proprietary floor systems not be utilized.
- B. Non-conductive locations: Floor systems, which must be grounded, are project specific. UT-Austin has no current standard for this.

PART 2: PRODUCTS – NOT USED

PART 3: EXECUTION – NOT USED
